Washing machine filter

WFST is a type of filter made from PET during an innovative technological process, which we install on the cold water inlet - for washing machines and dishwashers. The filter contains a soluble medium called polyphosphate, which is designed to protect household appliances from the buildup of limescale. Additionally, polyphosphate stabilizes iron compounds, thus preventing the formation of rust stains on fixtures. The filter is equipped with 3/4 inch threaded connections (standard for washing machines and dishwashers). On one side, it has internal threading, and on the other, external. This allows for easy installation between the supply hose and the valve or between the hose and the washing machine/dishwasher.

Technical data

Nazwa Catalogue No.	WFST	WFST/1
Przyłącze Connection	3/4"	
Wymiary (szer. x wys.) Dimensions (W x H)	6 x 15.5 cm	
Żywotność* Service life*	6000 l	7000 l
Max. ciśnienie pracy Max working pressure	6 bar	
Temperatura pracy Working temperature	2-30 °C	

* zależy od jakości wody zasilającej
