Aqua Line

Description of cartridges

AQUA LINE Fresh

The cartridge contains silver-impregnated activated carbon derived from coconut shells. The carbon effectively removes chlorine and organic compounds from the water while retaining the natural minerals essential for health. This improves the taste and smell of the water without depriving it of its valuable components. In addition, the silver present in the cartridge has antibacterial properties, which effectively inhibits the growth of microorganisms and significantly extends the life of the filter.

AQUA LINE Soft

It contains a softening bed and silver-impregnated activated carbon. Thanks to the softening bed, it reduces water hardness, thus preventing limescale build-up. The carbon effectively removes chlorine and organic compounds from the water, improving its taste and smell. Additionally, the silver contained in the cartridge has an antibacterial effect, protecting against the growth of microorganisms and extending the life of the cartridge.

AQUA LINE Mineral+

It contains silver-impregnated activated carbon from coconut shells and a mineralising bed. The carbon effectively removes chlorine and organic compounds from the water while retaining naturally occurring minerals. As a result, filtration improves the taste and smell of the water without depriving it of valuable components important for health. The silver contained in the cartridge has an antibacterial effect, it protects against the growth of microorganisms, which increases hygiene and extends the life of the cartridge. The mineralising bed enriches the water with valuable minerals essential for the proper functioning of the body, such as calcium, magnesium, sodium, potassium, iron and zinc.

Technical specifications

Catalogue No.	L-AQUA LINE FRESH	L-AQUA LINE SOFT	L-AQUA LINE MINERAL+
Service life	Max 12 mos*	Max 6 mos**	Max 12 mos*
Dimensions	305x72 mm		

*depends on the quality of the feed water (value given in months)

**depends on water hardness and contact time with water (value given in months)

Spout
Black Style
140 x 275 mm

Spout
New Style
140 x 275 mm

*type of screed depending on the selected variant
